---

PROFESSIONAL SUMMARY

Senior Mobile Engineer with 6.5 years of experience building scalable Android and cross-platform mobile applications using Kotlin, Android SDK, Jetpack Compose, Flutter, Java, and Swift. Specialized in MVVM, Clean Architecture, Coroutines, REST API integration, Firebase, and performance optimisation. Proven track record of delivering production-grade mobile applications, reducing crash rates, improving application performance, and leading feature migration initiatives across large-scale platforms.

CORE COMPETENCIES

Flutter • Dart • MVVM • Clean Architecture • Kotlin • Android SDK • Jetpack Compose • Coroutines • Flow • REST APIs • Firebase • Hilt • Dagger • CI/CD • Git • Performance Optimization • Modularization • System Design • Unit Testing

WORK EXPERIENCE

Recrosoft Technologies | Client: BigBasket

Senior Software Engineer (Flutter, Kotlin)
May 2025 – June 2026 | Bengaluru, India

BBDaily Integration into BigBasket Platform: Contributed to the migration and consolidation of BBdaily into the BigBasket application, supporting a unified commerce experience serving **25M+ registered users, 15M+ monthly orders, and 18M+ monthly visitors**.

- Developed and integrated **Flutter-based mobile experiences** to bring BBdaily's subscription and scheduled-delivery workflows into the existing BigBasket application, enabling a unified experience across **subscription-based scheduled deliveries** and **10–20 minute quick-commerce operations**.
- Built **reusable Flutter widgets, screens, and UI components** following scalable architecture and clean coding practices, improving consistency and maintainability across commerce journeys.
- Worked on **Flutter state management, API integration, navigation, asynchronous data flows, and backend-driven UI** to support complex ordering, subscription, and delivery workflows.
- Optimised Flutter application performance through **efficient widget composition, rendering optimisation, controlled rebuilds, and asset optimisation**, contributing to a responsive experience across supported devices.
- Designed and implemented **animation-rich UI systems using Lottie and Rive**, optimising animation rendering and asset usage to maintain smooth interactions without compromising application performance.
- Contributed to **operational scalability and user retention** through the migration and platform-consolidation initiative, helping bring multiple commerce workflows under a single application experience.
- Collaborated with product, design, backend, and QA teams to deliver and integrate features within an existing large-scale **Flutter-based commerce ecosystem**.

BigBasket Delivery Partner App:

- Extensively worked on the **migration of the Android application from Java to Kotlin**, progressively modernising the codebase while maintaining stability and backward compatibility across a large, mature application.
- Worked extensively with both **Kotlin and legacy Java code**, as the size and complexity of the application made a complete one-time migration impractical. Gradually migrated modules and components to Kotlin while continuing to maintain existing Java-based functionality.
- Maintained and enhanced **legacy Java libraries and modules**, fixing production bugs, addressing edge cases, and implementing minor feature enhancements without disrupting existing workflows.
- Implemented the latest libraries and packages, including but not limited to **Jetpack, Coroutines, Kotlin Flow, ViewModel, Room, and WorkManager**, to improve performance, responsiveness, reliability, and maintainability.

Epictus Solutions India Pvt. Ltd - Vahak

Mobile Developer SDE-2 (Flutter, Kotlin)
Nov 2023 – Jan 2025 | Bengaluru, India

- Collaborated effectively within a team of Flutter developers, leveraging **BLoC state management and MVVM architecture** to deliver key features and enhancements efficiently.
- Used **Kotlin** to create custom Flutter packages to be used in app.
- Improved Flutter app performance through **BLoC-based state management, lazy loading, and widget tree optimisation**, reducing load times and resource consumption.
- Performed comprehensive code reviews to maintain high code quality, ensuring adherence to **Flutter guidelines, best coding practices, and MVVM architecture principles**.
- Closely collaborated with designers and product managers to convert business needs into scalable and maintainable solutions

Creliant Software Pvt. Ltd.

Mobile Developer (Kotlin, Java, Swift)
Jul 2021 – Nov 2023 | Pune, India

- **CrelioHealth for Doctors**
- **CrelioHealth for Patients**
  - Utilized cutting-edge and emerging libraries such as Hilt, Coroutines, Room, Retrofit, and more, to architect, implement, and harness the full potential of available data resources with utmost effectiveness and efficiency.
  - Enhanced the app's stability and performance by utilising Firebase Crashlytics and Performance Monitoring SDKs.
  - Streamlined codebase by migrating from Java to Kotlin, adopting the latest architectural practices, and eliminating boilerplate code, resulting in reduced complexity and improved bug-fixing efficiency.
    .
- **CrelioHealth Inventory (Android, iOS)**
  - Developed the CrelioHealth Inventory Android application from the ground up, utilizing the power of Kotlin to deliver a robust and efficient solution.
  - Built CrelioHealth Inventory iOS using Swift from scratch, ensuring a seamless and user-friendly experience for iOS users.

Appyhigh Technology LLP

Android Developer (Kotlin, Java)
Jul 2020 – Mar 2021 | Hyderabad, India
TV Lens (OTT Watch)

- Independently owned the **end-to-end mobile application lifecycle**, spanning development, testing, release, and deployment using **Kotlin and Java**.
- Reduced crash rate of application from **8% to 1.5%**
- Separated the user interface from the application logic by using MVVM architectural pattern
- Utilized new and emerging libraries such as Room, Retrofit, Dagger-Hilt, Glide, Picasso, etc. to provide enhanced UX.

Bakbak Technologies Pvt Ltd

Android Developer (Java, Kotlin)
Apr 2019 – Jun 2020 | Bengaluru, India

- Integrated Google Admob and Facebook Ads using ad mediation
- Wrote clean, clear, and well-tested code in MVP and MVVM architecture with added language support of **9 Indian languages**
- **MyMandir:** A vernacular social media app for the devotional community with support for 9 Indian languages.
- **Eka:** Wellness app focused on building daily habits around Yoga & Meditation for mental well-being

EDUCATION

B. Tech (ECE), MCKV Institute of Engineering - 8.07 DGPA
2014 – 2018 | Kolkata, India

SKILLS

Mobile Engineering & Android Ecosystem

Flutter, Dart, Android, Kotlin, Java, Swift, MVVM, MVI, Hilt, Dagger, Room, Retrofit, Glide, Picasso

Backend, Firebase, Analytics & Tools

Firebase, Firestore, Crashlytics, REST API Integration, Snowplow, Kibana, Git, CleverTap, Nudge, AdMob
